

## **WHY A PODIUM INSTEAD OF A STEP LADDER, OR TOWER MAKES SENSE.**

The podium is a single-user access product, designed to provide a strong and stable work area within an enclosed and secure platform. They benefit the user by allowing a safe and elevated space which is more secure than a normal step ladder, yet less cumbersome than a low-level tower.

Most podiums on the market fold away when not in use for simple storage. This also allows them to be manoeuvred into places more easily too.

When in use, the operator will find themselves within an area where the usual 3 points of contact will not be required (as with a step), thanks to a 360-degree platform and guardrail environment. Also, by having deployable outriggers, the stability is increased, and the anti-surf feet and locking castors add to the solid feel and performance of the equipment.

### **THE STANDARD.**

The current recognised standard for a podium is BS 8620.

This standard refers to low-level work platforms that are for single person use, give side protection, and have a single platform no higher than 2.5m.

This test has many elements such as; dimensions, strength and rigidity, overturning, resistance to sliding, stability when access/egressing and material/component strength, deflection and retention.

**QUALITY PRODUCTS  
MADE IN BRITAIN  
FOR OVER 70 YEARS.**

**[britishladders.co.uk](http://britishladders.co.uk)**

The tests carried out are strenuous and specific to this kind of equipment, in particular platform strength, side-loading and anti-skid ensure an item will be safe for use within any environment - whether it's painting a ceiling, servicing a duct or drilling into a structure, the podium is designed and tested to ensure the operator has the safest and most suitable product available to them.

## A PROFESSIONAL BS 8620 CERTIFIED PODIUM STEP

**DESIGNED AND MANUFACTURED IN THE BRITAIN  
FOR MAXIMUM SAFETY, COMFORT & DURABILITY...**

- + Certified to BS 8620
- + Manufactured in Britain from heavy-duty aluminium for a robust, yet lightweight frame
- + Choice of 6 platform heights: 0.75m, 1m, 1.25m, 1.5m, 1.75m or 2m
- + 150kg load rating
- + Large non-slip platform
- + 1m high guardrail system creates a 360-degree enclosing working platform, protecting the user from a fall
- + 4 oversized, lockable, swivel castors
- + Self closing gate and anti-surf for extra security when working at height
- + Supplied with 2x stabilisers for maximum stability
- + Folds away flat for easy storage and transportation
- + Certificated by the Test & Research Centre.

All dimensions in metre. All measurements are nominal.
